

ABSTRACT

Disclose is an emergency informing terminal for making an emergency call securely, being advanced in reliability, without having to connect peripheral devices and the emergency informing terminal with connection wires. This emergency informing terminal comprises a terminal main body, and a peripheral device connected to the terminal main body and incorporated in part of the terminal main body. The peripheral device includes a microphone and a speaker for hands-free conversation. Further, the peripheral device includes an indicator for showing the operating state, an emergency informing button to be pressed by the user in case of emergency, a communication antenna for making data communication and conversation with the emergency call center, a GPS antenna for acquiring position information or time information, and a gyro sensor for detecting the vehicle direction or acceleration.
